Education

B.Tech in Computer Science & Engineering

R.V.R & J.C College of Engineering, Guntur

Aug 2022 – Jul 2026

CGPA: 9.08/10.0

– **Relevant Coursework:** Data Structures & Algorithms, Operating Systems, DBMS, Distributed Systems, System Design, OOP

Work Experience

Techolution

Software Engineer Intern

Mar 2026 – Present

Hyderabad, India

- Architected the **micro-frontend system** for *Deploy Genie* using **React.js + Webpack Module Federation** split a monolith into independently deployable micro-apps; each team ships without blocking others.
- Built the **Node.js + Express** orchestration backend powering automated deployments end-to-end REST APIs consumed by the shell app, with **agentic workflows** that trigger, monitor, and validate releases without human intervention.
- Implemented **AI-driven auto-deploy logic** that detects build readiness, selects targets, handles rollbacks, and notifies stakeholders cutting manual release overhead and making deployments fully autonomous.

Outbox Labs

Software Engineer Intern

Jan 2026 – Feb 2026

Bengaluru, India

- Worked across the full stack **frontend (Next.js) and backend (Node.js, PostgreSQL)** shipping user-facing features end-to-end; collaborated closely with the PM to scope, prioritise, and deliver production releases with zero rollbacks.
- Built **LLM-powered email automation** and inbox sync from scratch wired live AI responses directly into user flows, iterated on prompt behavior in production, and shipped within days of first commit.
- Hunted down and fixed backend bottlenecks under production pressure caching and query-level fixes cut response latency **45%**; validated improvements end-to-end with production telemetry.

MetLife

Software Engineering Intern

Feb 2025 – Aug 2025

Noida, India

- Built **Node.js microservices** handling **10K+ daily requests** at **99.9% uptime**; owned test suites achieving **80%+ unit and functional coverage** across all services.
- Engineered a **RAG pipeline** and async inference layer for a cloud AI platform serving **50K+ users** cut query resolution time by **20%** and scaled without infrastructure changes.
- Built **Docker CI/CD pipelines** and TypeScript Backstage plugins that **cut release cycles 40%**; delivered full-stack onboarding flows for a React Native app shipped to the Egypt market.

Honors & Awards

- **Finalist Meta OpenEnv Hackathon** (*India's Largest AI Hackathon, 2026*): Built SENTINEL, an RL-trained AI safety system; selected among top finalists from thousands of nationwide submissions.
- **1st Place Techolution Hackathon V1**: Best AI solution among **500+ participants**. **1st Place NRI Hackathon** (*Top 0.8%*): Won out of **119 teams** with a production-ready AI prototype.
- **Runner-Up TECHTREK 2k25** (*National-Level*): Top 2% among **100+ competitors**; full-stack hackathon.
- **Man of the Event MetLife Code Challenge: #1 Individual Performer** out of all participants.
- **Open Source**: 2 published npm packages with **1,500+ combined downloads**.

Projects

SENTINEL AI Agent Safety Platform | *Python, FastAPI, Reinforcement Learning, HuggingFace* | [GitHub](#) **Apr 2026**
| [Live](#)

- **97.7% threat detection rate** built an AI safety layer that intercepts dangerous agent actions before they hit production; trained using reinforcement learning (340 steps) vs. 0% detection with no supervisor.
- **94.7% damage prevented** in live simulation across 4 concurrent AI agents catches hallucinations, unauthorized actions, and over-confident decisions; generalises to attack types never seen during training.
- Shipped as a **live API + real-time dashboard** (FastAPI, Docker, HuggingFace Spaces) supporting REST, MCP, and A2A protocols any AI agent plugs in and gets supervised immediately, out of the box.

Orchestrate Support Triage Agent | *Python, FastAPI, BM25 + BGE Embeddings, Cross-Encoder Rerank* **May 2026**
| [GitHub](#)

- **100/100 scorecard** with **0 prompt-injection failures** built a 7-stage deterministic triage agent (sanitize, classify, retrieve, generate, verify) that escalates instead of hallucinating when evidence is weak.
- Engineered a **hybrid RAG pipeline** (BM25 + BGE dense + Reciprocal Rank Fusion + cross-encoder rerank) with Pydantic-strict outputs and **exact-quote source receipts on 100% of replied tickets** every claim provably grounded.
- Shipped an **adversarial verifier with self-healing rewrite loop** and 3-signal escalation gate; processed **29 production tickets concurrently** via async semaphore with full per-stage JSON traces for auditability.

Technical Skills

- **Languages:** Python, JavaScript, TypeScript, SQL, Java
- **Frontend:** React, Next.js, React Native, Webpack Module Federation, HTML, CSS
- **Backend & APIs:** Node.js, Express.js, FastAPI, REST APIs, WebSockets, Microservices, Micro-frontends
- **Databases & Infra:** PostgreSQL, MongoDB, Redis, AWS, Docker, CI/CD (Jenkins), Apache Kafka, Git, Linux
- **AI/ML:** LLM systems, Agentic AI, Hybrid RAG (BM25 + Dense + Rerank), Reinforcement Learning (GRPO), Async inference
